

## Printer Capability Summary

The following table summarises the main features of the printers supported by the APP. Full details of the support, and any printer entry specific comments or requirements, are available in the appropriate printer's Supported Printer Specification (SPS) file.

In the following tables, **Yes** is used when a printer's optional feature (such as multiple bins) is configured into the driver but has not been fully tested by Uniplex (probably because the test printer did not have the option installed). **YES** is used to indicate that the particular option has been tested. The columns are:

Page Orientation	Indicates the mode of printing: <b>Portrait</b> (as on this page) or <b>Landscape</b> (sideways across the page).
Multi-bins	Indicates whether definitions for switching between multiple paper trays exist.
High-res	Indicates whether printing of high quality graphics, pie charts, etc. is possible when Uniplex AGS installed. On some printers this is not possible in Landscape.
Line Draw	Indicates how Uniplex prints boxes and lines. Can be either as solid <b>Lines</b> or <b>Characters</b> (using the characters +, - and !).
Duplex	Indicates whether definitions for switching Duplex printing on and off exist (both sides of the paper).
No. of Fonts	Shows how many of each type of font are configured in Uniplex. The three columns break the fonts into <b>Fixed</b> pitch, fixed pointsize <b>Proportional</b> and <b>Scalable</b> pointsize proportional.

Printer Capability Table, Part I
